## Introduction

The expanded and updated district-level database for 20 states includes data on key agriculture and socio-economic variables from 1966 to 2015. This documentation is for the updated apportioned database (i.e. data for 1966 district boundaries).

This database builds on the earlier ICRISAT district-level database of 13 states (Andhra Pradesh, Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, Bihar, West Bengal and Odisha) with an additional 3 states (Assam, Himachal Pradesh and Kerala), 3 newly formed states in 2000 (Chhattisgarh, Jharkhand and Uttarakhand) and Telangana formed in 2013. The earlier database was created with funding support from ICRISAT, World Bank, System Wide Livestock Program (SLP-CGIAR) in collaboration with National Institute of Agricultural Economics and Policy Research (NIAP), a think tank of the Indian Council of Agricultural Research (ICAR), New Delhi.

The current update of the database is being jointly carried out by ICRISAT and Tata Cornell Institute (TCI) and includes data for all districts in 20 states until 2015. It includes data on crop area and production, irrigated area, monthly rainfall, livestock and agricultural implements, operational holdings, population census and select socio-economic and agro-ecological variables. Additionally, the scope of the database has been expanded to include data on soft infrastructure related to education, health, nutrition and credit. Data on environmental variables like temperature, Actual Evapotranspiration (AET), Potential Evapotranspiration (PET), etc., was generated using pixel-level data from Terra Climate database. A web-based interactive tool (with a dashboard and spatial maps) is being created to add value to the database and allow quick access to and extraction of information.

The database is divided into 2 datasets, apportioned that includes only the 1966 base districts, and unapportioned that includes all the districts formed until 2015 in 20 states of India. The database in this documentation relates to the 1966 district boundaries i.e., 313 districts. Data on districts formed after 1966 were given back to their parent district and removed from the file. Thus, consistent and comparable time series data are available for all the districts from after 1966. The methodology for apportioning newly formed districts to their parent district and a list of districts formed after 1966 and their parent districts are given in appendices 1 and 2.

The data are stored in Excel spreadsheet. Compilation, matching data from different states and sources, computerization, proof reading, and subsequent validation of raw data were extremely time-consuming. Despite our efforts, several anomalies remain in the database and are highlighted in the section on 'Data clarification and anomalies'. Users are urged to read this documentation carefully prior to using the data, particularly the sections on data clarification and anomalies and missing data, and bring to our notice any glaring inconsistencies so that we can continuously improve the quality of data.

Several data sources were utilized to compile the database. Many times, staff working on this project had to visit offices of the state Directorates of Agriculture, state Bureaus of Economics and Statistics, Department of Animal husbandry, Department of Horticulture etc. to collect the latest data. Details on the sources in each state are given in the section on 'data sources'. The support and cooperation extended by these organizations is highly appreciated, and we take this opportunity to thank them in enabling the update. But for their cooperation, this database would not have been completed.

# 1. File Groups and Data Files Included in the Database

The database is divided into the following file groups and stored in Excel spreadsheet.

	File Groups and Data Files
<b>I</b>	<b>Crops</b>
1	Area, production and yield (APY)
2	Area under high yielding varieties (cereals)
<b>II</b>	<b>Irrigation</b>
1	Crop-wise
2	Source-wise
<b>III</b>	<b>Biophysical</b>
1	Land use
2	Monthly rainfall
3	Normal rainfall
4	Soil type <sup>1</sup>
5	Length of growing period (LGP) <sup>1</sup>
<b>IV</b>	<b>Inputs</b>
1	Fertilizer consumption
2	Seasonal fertilizer consumption
<b>V</b>	<b>Prices</b>
1	Farm harvest prices (FHP)
<b>VI</b>	<b>Census</b>
1	Population
2	Livestock
3	Crossbred and Indigenous cattle
4	Agricultural implements
5	Operational holdings

	File Groups and Data Files
<b>VII</b>	<b>Livestock Products</b>
1	Milk
2	Meat
3	Egg
<b>VIII</b>	<b>Infrastructure</b>
1	Markets and roads
2	Banks and post offices
3	Veterinary institutions (under progress)
4	Health (under progress)
<b>IX</b>	<b>Domestic Product</b>
1	Sector-wise GDP
<b>X<sup>2</sup></b>	<b>Environment (pixel generated)</b>
1	Actual Evapotranspiration (AET)
2	Potential Evapotranspiration (PET)
3	Climate Water Deficit (Def)
4	Precipitation (Ppt)
5	Maximum Temperature (Tmax)
6	Minimum Temperature (Tmin)
<sup>1</sup> Variables in these data files are static, i.e., single point data, not time series.	
<sup>2</sup> Apportioning has not been done for this group of files and are only available from the unapportioned datasets.	

---

**Standalone additional files for bulk download only<sup>1</sup>**

---

**Name of the file**

---

Fruits APY	By type
Vegetables APY	By type
Spices APY	By type
Season-wise APY	All major crops
GDP (current & constant)	Total and by sectors
NDP (current & constant)	Total and by sectors
Education	Number of institutions
Warehouses and godowns	Number and capacity
Cold storage	Number and capacity
Groundwater table	Depth of water table
Credit	Agriculture sector
Nutrition	NHFS survey data
Environment	From Pixel level data

---

<sup>1</sup> Apportioning has not been done for files in this group and are available for bulk download only for the unapportioned datasets.

---

## 2. Summary of District-level Database Documentation

The district-level database for India is divided into two categories: Apportioned database and Unapportioned database.

**Apportioned database:** Data for all variables for the districts formed after 1966 have been given back to their parent district and removed from the database. A total of 258 new districts were formed between 1966 and 2015. For example, Rangareddy district was formed in 1978-1979 from Hyderabad. The data for all variables for Rangareddy district were given back to its parent district Hyderabad and Rangareddy district, removed from the database. In case a new district is formed from more than 1 parent district the criterion used for determining the apportioning percentage was based on the geographical area of the parent district, transferred to the new district. The data for all variables in the database [except for rainfall, farm harvest prices (FHP) and wages] were apportioned using using proportion of geographical area transfert to the new district. Thus, the continuity of data over time was ensured to compare key trends at two points in time, enabling time series analysis. For more details, see Appendix 1 on adjustment of district boundaries. This database contains data for 313 districts spread across 20 states of India from 1966-67 to 2015-16.

### States covered

The database covers the 20 states of Andhra Pradesh, Bihar, Gujarat, Haryana, Karnataka, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh, West Bengal, Chhattisgarh, Jharkhand, Uttarakhand, Assam, Himachal Pradesh, Kerala and Telangana.

### Years

1966-67 to 2015-2016.

---

**Number of districts in 20 states<sup>1</sup> in the district-level database (1966 base) and in 2015.**

---

State code	Name of state	Apportioned (1966 base)	Unapportioned (2015)
		Number of districts	Number of districts
1	Andhra Pradesh	20	13
2	Bihar	17	38
3	Gujarat	18	33
4	Haryana	7	22
5	Karnataka	19	30
6	Madhya Pradesh	43	51
7	Maharashtra	26	36
8	Odisha	13	30
9	Punjab	11	22
10	Rajasthan	26	33
11	Tamil Nadu	13	32
12	Uttar Pradesh	54	75
13	West Bengal	16	23
14	Chhattisgarh	6	27
15	Jharkhand	6	24
16	Uttarakhand	8	13
17	Assam	10	33
18	Himachal Pradesh	10	12
19	Kerala	10	14
20	Telangana	-	10
<b>Total</b>		<b>313</b>	<b>571</b>

---

<sup>1</sup> Chhattisgarh, Jharkhand and Uttarakhand states were formed in 2000 from Madhya Pradesh, Bihar and Uttar Pradesh states, respectively. Telangana was formed from the erstwhile Andhra Pradesh in 2013.

---

### Missing data

Missing data are shown as '-1' in the data files in the following cases:

- ♦ Complete year missing for all variables in a file (i.e., variable group) for selected states/year not included in the dataset.
- ♦ Data missing for a few districts for some variables in a file.
- ♦ Data missing for a specific crop/variable in a file for selected states (for instance, the crop is not grown in that particular state).

### Data format

The data are stored in Excel spreadsheet. The database is divided into 26 data files.

### Common variables

In the database, each file has the following four common identifier variables: State code, State name, District code and District name. All identifiers including those related to agro-ecological zone, SAT and non-SAT, etc., are shown in Appendix 4.

## Summary of data files

File description	Variable name
<b>Time series data files</b>	
Area and production	Rice, Wheat, Sorghum (kharif), Sorghum (rabi), Sorghum (total), Pearl millet, Maize, Finger millet, Barley, Cereals, Chickpea, Pigeonpea, Minor pulses, Total pulses, Groundnut, Sesamum, Rapeseed and Mustard, Safflower, Castor, Linseed, Sunflower, Soyabean, Total oilseeds, Sugarcane, Cotton, Fruits, Vegetables, Total fruits and vegetables, Potatoes, Onions, Fodder
Area under HYV cereal crops	Rice, Wheat, Sorghum, Pearl millet, Maize, Finger millet, Total HYV area
Crop-wise irrigated area	Rice, Wheat, Sorghum (kharif), Sorghum (rabi), Sorghum (total), Pearl millet, Maize, Finger millet, Barley, Chickpea, Pigeonpea, Minor pulses, Groundnut, Sesamum, Rapeseed and Mustard, Linseed, Sugarcane, Cotton, Total fruits and vegetables
Source-wise irrigated area	Net irrigated area by Canals, Tanks, Tube wells, Other wells, Total wells, Gross irrigated area, Net irrigated area
Fertilizer consumption	Nitrogen, Phosphate, Potash, Total (NPK)
Seasonal Fertilizer consumption	Nitrogen, Phosphate, Potash, Total (NPK) for kharif and rabi seasons
Land use	Geographical area, Forest area, Barren and uncultivable land, Land put to non-agricultural uses, Cultivable waste, Permanent pastures & other grazing land, Other fallow land, Current fallow land
Normal monthly rainfall	January-December normal rainfall, Annual normal rainfall
Actual monthly rainfall	Annual rainfall, January-December actual Rainfall
Length of Growing Period	Length of growing period (days)
Soil type	Type of soil
Farm harvest prices	Rice, Paddy, Wheat, Sorghum, Pearl millet, Maize, Finger millet, Barley, Chickpea, Pigeonpea, Sugarcane (gur), Groundnut, Sesamum, Rapeseed and Mustard, Linseed, Castor, Cotton (kapas)
Population Census	Total population, Male population, Female population, Total rural population, Male rural population, Female rural population, Total urban population, Male urban population, Female urban population, Total literates, Male literates, Female literates, Total rural literates, Male rural literates, Female rural literates, Total Urban literates, Male urban literates, Female urban literates, Total cultivators, Male cultivators, Female cultivators, Total rural cultivators, Total urban cultivators, Male urban cultivators, Female urban cultivators, Total agricultural labour, Male agricultural labour, Female agricultural labour, Total rural agricultural labour, Male rural agricultural labour, Female rural agricultural labour, Total urban agricultural labour, Male urban agricultural labour, Female urban agricultural labour
Livestock Census	Total male and female cattle (crossbred + indigenous), Adult male cattle (crossbred + indigenous), Adult female cattle (crossbred + indigenous), Young male cattle (crossbred + indigenous), Young female cattle (crossbred + indigenous), Young male and female cattle (crossbred + indigenous), Total male and female buffaloes, Adult male buffaloes, Adult female buffaloes, Young male buffaloes, Young female buffaloes, Young male and female buffaloes, Total sheep (adult + young stock), Total goats (adult + young stock), Total horses (adult + young stock), Total donkeys (adult + young stock), Total camels (adult + young stock), Total pigs (adult + young stock), Total livestock (excluding dogs), Total poultry
Agricultural Implements Census	Diesel pump sets, Electric pump sets, Power tiller, Tractor
Agricultural Census	Marginal number, Marginal area (below 1 ha); Small number, Small area (1 to 2 ha); Semi-medium number, Semi-medium area (2 to 4 ha); Medium number, Medium area (4 to 10 ha); Large number, Large area (above 10 ha); Total number, Total area

Contd...

Contd...

File description	Variable name
Markets and Roads	Principle markets, (Nos), Sub-markets (Nos), Total markets (Nos), Road length (Kms)
Field Labour Wages	District wage rate (₹), State wage rate (₹)
GDP	Primary Sector GDP (current and constant), Secondary sector GDP (current and constant), Tertiary sector GDP (current and constant), Total GDP (current and constant)
<b>Environment variables</b>	
Precipitation	January-December Condensation of atmospheric water vapour that falls under gravity
Minimum Temperature	January-December lowest temperature attained at a specific location during a specified period
Maximum Temperature	January-December highest temperature reported for a given location during a given period
Q	January-December runoff: When rain or snow falls onto the earth, it starts moving along the slopes. A portion of it seeps into the soil and replenishes the groundwater
Potential Evapotranspiration	January-December potential Evapotranspiration
Actual Evapotranspiration	January-December actual Evapotranspiration: It is the actual amount of water lost to evapotranspiration from the soil–plant continuum by an actively growing plant or crop
Climate Water Deficit	January-December Climate Water deficit

### 3. List and Description of Data Files

#### Crops Area & Production

<b>Filename</b> : DT-AREA-PROD-A.XLS	<b>No. of records</b> :15508
<b>Years</b> : 1966 to 2015	<b>Date of last update</b> : May 2019
<b>Units</b> : Area in '000 hectares, Production in '000 tons, Yield in kg/ha	

S.No.	Abbreviation	Description of variables
1	STCODE	State code
2	STNAME	State name
3	DIST	District code
4	DISTNAME	District name
5	YEAR	Year (1966 relates to 1966-67 and so on)
6	RICE_TA	Rice area
7	RICE_TQ	Rice production
8	WHT_TA	Wheat area
9	WHT_TQ	Wheat production
10	SORG_KA	Kharif sorghum area
11	SORG_KQ	Kharif sorghum production
12	SORG_RA	Rabi sorghum area
13	SORG_RQ	Rabi sorghum production
14	SORG_TA	Total sorghum area
15	SORG_TQ	Total sorghum production
16	PMLT_TA	Pearl millet area

10	MAIZ_TAH	Maize HYV area
11	FMLT_TAH	Finger millet HYV area
12	TOTAL_HYV	Total HYV area

---

<sup>1</sup> HYV area has not been reported for many states in recent years.

---

---

### Land Use

---

**Filename :** DT-LANDUSE-A.XLS                      **No. of records** : 15227  
**Years** : 1966 to 2015                      **Date of last update** : May 2019  
**Units** : Area in '000 hectares

---

S.No.	Abbreviation	Description of variables
1	STCODE	State code
2	STNAME	State name
3	DIST	District code
4	DISTNAME	District name
5	YEAR	Year (1966 relates to 1966-67 and so on)
6	TOTGEOG	Geographical area/Reporting area for land utilization statistics (RLU)
7	FOREST	Forest area
8	BARREN	Barren and uncultivable land
9	NONAGRI	Land put to non-agricultural uses
10	CWASTE	Cultivable waste
11	PPASTUR	Permanent pastures & other grazing land
12	OTFALOW	Other fallow lands
13	CUFALOW	Current fallow lands
14	NCA	Net cropped area (or Net Sown Area)
15	GCA	Gross cropped area (or Total Cropped Area)

---

---

### Source-wise Irrigated Area

---

**Filename** : DT-SIA-A.XLS      **No. of records** : 14381  
**Years** : 1966 to 2015      **Date of last update** : May 2019  
**Units** : '000 hectares.

---

S.No.	Abbreviation	Description of variables
1	STCODE	State code
2	STNAME	State name
3	DIST	District code
4	DISTNAME	District name
5	YEAR	Year (1966 relates to 1966-67 and so on)
6	CANALS	Net irrigated area by canals
7	TANKS	Net irrigated area by tanks <sup>1</sup>
8	TUBEWELL	Net irrigated area by tube wells
9	OTHWELL	Net irrigated area by other wells <sup>2</sup>
10	TOTWELL	Net irrigated area by total wells
11	OTHSOUR	Net irrigated area by other sources
12	NIA	Net irrigated area
13	GIA	Gross irrigated area

---

<sup>1</sup> Data for Maharashtra combines the area irrigated under canals, tanks and other sources under 'surface irrigation'. For our purposes, data for surface irrigation are listed under the variable 'Net irrigated area by tanks'.

<sup>2</sup> For Odisha, the variable 'Net irrigated area by other sources' is included under the variable 'Net irrigated area by other wells'.

12	Total GDP_Con	Total GDP at constant prices
13	Total GDP_Cur	Total GDP at current prices

---

## 4. Data Clarification and Anomalies

### Area and production

- ◆ 'Paddy' production figures refer to 'rice' production for all districts. For 'West Bengal' and 'Karnataka', production was reported for 'paddy' only in some years. These were converted into 'rice' by using 0.66 as the conversion factor.
- ◆ 'Cotton' production is reported in terms of 'lint'. In the data sources, production is reported in bales of 170 kg each. These were converted into '000 tons for all districts.
- ◆ The production figure for 'sugarcane' refers to 'raw sugar' (gur). Sugarcane production was converted into raw sugar by taking 10% of cane production.
- ◆ 'Minor pulses' include all pulses other than chickpea and pigeonpea, e.g., green gram, black gram, horse gram, lentil, cowpea, moth bean, etc.
- ◆ Area data for 'chickpea' and 'pigeonpea' are from Agricultural Situation in India up to 1990 and area data for "minor pulses" and 'total pulses' are from Indian Agricultural Statistics Volume II. Hence, owing to different sources, 'chickpea', 'pigeonpea' and 'minor pulses' areas do not add up to 'total pulses' area in some cases.
- ◆ Production data was not available for 'total fruits', 'vegetables', 'potato' and 'onion'.
- ◆ Production data for 'total cereals', 'pulses' and 'oilseeds' was not available for select years.
- ◆ Total cereals, pulses and oilseeds data is from state-level data sources since DACNET is not publishing production figures for these crop groups.
- ◆ For Jharkhand, paddy APY data is from state sources.
- ◆ For Odisha state, crop APY data is from the Directorate of Agriculture and Food Production.
- ◆ Area and Production data for 'total oilseeds' includes coconut.
- ◆ APY data is not available separately for coconut in the database.
- ◆ In some cases, 'crop production' may be reported while 'crop area' is listed as '0', i.e., less than 500 ha. This generally occurs for crops of minor importance in specific states/districts.
- ◆ For 'sorghum', crop area and production under summer crop are included in the rabi season.
- ◆ For season-wise paddy, area and production for early kharif are shown under kharif, late kharif under rabi while rabi paddy is shown under summer (in states where early and late sowing are practiced).

### Farm harvest prices

- ◆ Both 'rice' and 'paddy' prices were included depending on the availability of data from the source. These prices are mainly for coarse paddy/rice.
- ◆ 'Cotton' prices are for '*kapas*' i.e., raw cotton. In some states, cotton prices are reported for several cotton varieties. The price of the most dominant variety is reported. For Punjab and Haryana, we have used an average of American and Desi cotton.
- ◆ 'Sugarcane' prices were reported for 'raw sugar' (*gur*) prices.
- ◆ 'Season-wise' farm harvest prices are not available in this dataset.
- ◆ 'Cotton prices' for Maharashtra state were not available from 1973 onwards due to monopoly procurement by the government.
- ◆ For 'Odisha', farm harvest prices were not reported/released from 1988 onwards.
- ◆ Farm harvest prices were not reported for several districts where the crop is of minor importance or relatively less important. In such cases, the missing data are shown as '-1.'

### Crop-wise irrigation

- ◆ For some crops, crop-wise irrigated area exceeds the actual area under the crop. This can occur when data comes from different sources. No adjustments were made to correct this inconsistency in our dataset.

- ◆ For 'Odisha', data on this variable were available from 1972 onwards.
- ◆ For 'West Bengal', data on this variable were not available.

### Source-wise irrigation

- ◆ Data on the variable 'dug wells' was included in the variable 'other wells'.
- ◆ For 'Odisha', source-wise irrigated area values were only available 1970 onwards. Source-wise net irrigated area values were not available from 1977 to 1981 and from 1984 to 1987; instead source-wise gross irrigated areas are reported. The variable 'other sources' of irrigation is included under the variable 'other wells'.
- ◆ From 1975 onwards, data for Maharashtra combines area irrigated under canals, tanks and other sources under 'surface irrigation'. For our purposes, data for surface irrigation are listed under the variable 'tanks'.
- ◆ For 'West Bengal', data on source-wise irrigation was not available.
- ◆ Data on canals was available only for some years.
- ◆ Data was not available for Maharashtra from 2002 onwards.
- ◆ Source-wise irrigation data was available for Gujarat for select years since 2007.
- ◆ From 2000 onwards, for Karnataka, 'lift irrigation' data was included in the 'other sources' variable.

### Area under HYV cereals

- ◆ For 'finger millet', area under HYVs was available only from 1990 onwards.
- ◆ 'HYV area' for a selected cereal crop exceeds actual area under that crop for some districts in some states. This may occur when data comes from different sources. In such cases, no adjustments have been made in the data.
- ◆ For 'West Bengal', area under HYVs was not available from 1988 onwards.
- ◆ Since 2010, many states have not reported area under HYVs as they have reached saturation point.

### Gross and net irrigated area

- ◆ For 'West Bengal', data on net and gross irrigated areas were not available from 1985 onwards.

### Land use

- ◆ Area under 'miscellaneous tree crops and groves' was not included in the dataset.
- ◆ 'Geographical area' is reported instead of 'RLU' (Reporting area for land use statistics) for some states/districts for some years. Reporting area stands for the area for which data on land use classification are available i.e., the sum of areas under different land use classifications generally equals the RLU.
- ◆ For 'Odisha', land use data values were available only from 1972 onwards.

### Fodder area

- ◆ For 'Bihar, West Bengal, Assam, Himachal Pradesh and Kerala', data for fodder area is available from 1970 onwards.

### Livestock

- ◆ Adult 'cattle' and 'buffaloes' are the sum of crossbred and indigenous breeds. For crossbred cattle, an 'adult' is over 2½ years old and for indigenous breeds, it is over 3 years. In many states, the time of collection of livestock census data does not match. Hence the years reported vary from state to state, particularly in later years.

### Agricultural implements

- ◆ Data was collected for 'four variables' from the 1972 census onwards. In many states, the time of collection of data for the agricultural implements census did not match. Hence the years reported vary from state to state, particularly in later years.

- ◆ Data collection for agricultural implements was removed from the livestock census since 2003. Hence, for later years, data on the availability of agricultural implements is sketchy and missing for many years.

### Roads and markets

- ◆ Data gaps were filled by interpolation, wherever required.

### Length of Growing Period (LGP)

- ◆ The growing period is the period when the moisture in the soil is adequate to support plant growth. LGP was calculated following the FAO model (Higgins and Kassam 1981). The growing period, as per the model, starts when precipitation (P) exceeds 0.5 potential evapotranspiration (PE) and ends with the utilization of an assumed quantum of available stored soil moisture assumed as 100 mm except for Vertisols (250 mm) after P falls below PE. The period (in days) calculated for each observation site was plotted and isolines drawn at specified intervals. Observed rainfall data for over 200 locations was taken as a base for the whole of India. Data for missing districts was estimated from the nearest districts located in a similar agro-ecological region. PE data are estimated (by the modified Penman's method); these are published by IMD. In some cases, PE estimated by Hargreaves method has been included.

## 5. Available and Missing Data

Missing data are provided from 1966 to 2015. Data could be missing because: (a) Data was not published /not available or (b) crop activity was unimportant in the state or a few districts in the state; hence data was not recorded for area, production, crop-wise irrigation, and FHP for such crops.

Missing data can be grouped into 3 categories:

- ◆ Complete year missing for all variables in a file (i.e., variable group) for selected states. For example, several years' data for crop-wise irrigated area, source-wise irrigated area, and land use are missing for West Bengal.
- ◆ Data missing for a few districts for some variables in a file. Such cases are few and restricted to a few variables in a file.
- ◆ Data missing for a specific crop/variable in a file for selected states. (For example, potato and onion area data are not reported for some states in the sources available with us).

Missing data are shown as '-1' in the data files.

State-wise and year-wise missing data for core variable groups in a file are shown in the enclosed tables.

<b>Available data and missing data for Andhra Pradesh from 1966 to 2015.</b>		
<b>Variables</b>	<b>Years data is available</b>	<b>Years data is missing</b>
Area and production (crops)	1966 to 2015	-

## 6. Data Sources

Data was downloaded from online sources wherever available and soft and published hard copies were collected from respective state departments. Soft copies and published hard copies that include season and crop reports, statistical abstract, statistical handbook, agricultural statistics, district handbooks, integrated sample survey reports (livestock and products), infrastructure statistics, farm harvest price for principal crops of India, agricultural wages in India, fertilizer statistics, etc. were used for the update of the database. District-level environmental data was generated from pixel-level data from Terra Climate database.

Data Sources for key variables groups	
Data	Source
Area, Production and Yield (APY)	Directorate of Economics and Statistics (DES, Delhi); State DES; State Directorate of Agriculture (DOA)
HYV area (cereals)	State DES; State (DOA)
Crop-wise irrigation	DES, Delhi; State DES; State DOA
Source-wise irrigation	DES, Delhi; State DES; State DOA
Land use	DES, Delhi; State DES; State DOA
Rainfall (monthly, normal)	State DES; Indian Meteorological Department
Length of Growing Period (LGP)	ICRISAT
Soil type	ICRISAT
Fertilizer consumption	Fertilizer Association of India, Delhi
Wages	DES, Delhi
Farm harvest price	DES, Delhi
Population	Census data Registrar General of India
Livestock	State Dept of Animal Husbandry and Dairying
Agricultural implements	State Dept of Animal Husbandry; State DES
Operational holdings	Agricultural Census data
Milk, meat, egg production	State Dept of Animal Husbandry and Dairying
Markets and roads	State Directorate of Agriculture Marketing; Public Works Department (PWD); State DES
Banks and post offices	State DES
Veterinary institutions	State Dept of Animal Husbandry and Dairying
Health	State DES
Sector-wise GDP	State DES; CMIE database

## Appendix 1. Methodology and rationale for adjusting district boundaries (1966 base)

The geographical area of a particular district is typically not constant over time, i.e., districts tend to gain and lose area over time for a variety of reasons, most of them political. During the period covered by the dataset, there were numerous adjustments in the boundaries of some of the districts. These changes have occurred, for example, upon the division of the former Punjab into Punjab, Haryana and Himachal Pradesh; in the division of certain districts into two or more smaller districts in many places; or in the transfer of parts of one district to another. As far as possible, the dataset preserves the original district boundaries: Where districts have been broken up, values for the resultant districts in later years have been summed to yield values appropriate to a “shadow” consolidated district. This is necessary for maintaining consistency in data over the years. In order to take into account these changes, we had to choose a particular (agricultural) reference year, i.e., stick to the size of the district in that particular year and adjust the data for all the other years accordingly.

Since 1966, 258 new districts have been formed, and the data for all the variables for these districts have been given back to their parent district and removed from the dataset. The criterion used for determining the apportioning percentage was based on the geographical area of the parent district transferred to the new district. All variables in the dataset [except rainfall, farm harvest prices (FHP) and wages]<sup>1</sup> were apportioned using this proportion.

Of the 258 new districts, about 224 were formed from a single parent district; hence the apportioning percentage was 100, with no room for error. For example, Rajnandgaon district was created fully from Durg district on 1 May 1973. Hence data for Rajnandgaon was added to that of Durg starting 1972/73. For the remaining districts, the new districts were formed from 2 parent districts and only in the case of 4 districts from 3 parent districts. Ideally in such cases, taluka-wise data would be more appropriate in recreating the parent district. However, in the absence of such data, the parent districts were created using earlier criteria i.e., geographical area of the parent district transferred to the new district. For example, Vizianagaram district was created from Srikakulam (50%) and Visakhapatnam (50%) districts on 18 May 1979. Hence all the data for Vizianagaram were added to Srikakulam and Visakhapatnam in a fifty-fifty proportion from 1979/80 onwards. The state of Punjab was reorganized on 1 November 1966 as per the Punjab Reorganization Act. A new state Haryana was created. Haryana initially consisted of 7 districts; we stick to these 7 districts by apportioning the data of the new districts formed after 1966 to their parent district. Similarly, the reorganized Punjab state had 11 districts to which we stick.

For a detailed list of new districts formed after 1966 and their parent districts, see Appendix 3.

---

<sup>1</sup> In the case of rainfall, farm harvest prices and wages, the data of newly formed districts were not apportioned to the parent district. Instead, data of the truncated parent district were retained.
